U.S Models Only

2001-2005 Yamaha FZ1

**Stage 1**

For mildly tuned machines using the stock airbox, with stock filter. May also be used with a good aftermarket slip-on exhaust system. This kit was designed with the EXUP valve retained.

This graph shows a typical gain with a Dynojet jet kit.

# WARNING

**NO SMOKING!  
 NO OPEN FLAME!

<b>Parts List</b>		
4	Main Jets	DJ118
4	Main Jets	DJ120
4	Main Jets	DJ122
4	Main Jets	DJ124
4	Main Jets	DJ126
4	Main Jets	DJ128
4	Fuel Needles	DNO761
4	E-clips	DE0001
4	Adjusting Washers	DW0001
4	Needle Springs	DSP77
1	Plug Drill	DD 5/32
1	Screw	DS0001

## STAGE ONE INSTRUCTIONS

1. Remove the vacuum slides from the carbs. Remove the stock needles and spacers, noting the order of assembly (Fig. A).
2. Install the Dynojet needles on groove #3 from the top for cylinders 1&4 and groove #4 from the top for cylinders 2&3. Use all stock spacers (Fig. A). The small Dynojet washers are for half step increments and do not have to be installed at this time. **NOTE: The DSP77 springs do not have to be used, they are supplied in case the stock springs are misplaced.** After installing the slides in the carbs be sure to check slide movement manually.
3. Remove the stock main jets and install the Dynojet main jets provided. If you are running the stock exhaust install the DJ122 main jets. If you are running an aftermarket slip-on exhaust with a high flowing baffle, use the DJ124 main jets. The extra main jets are for high altitude applications. Be sure that the jet you are changing is the main jet.
4. Locate the fuel mixture plug (Fig. B). If you see a screw head at Fig. B proceed to adjusting procedure. With the DD #5/32 drill bit provided carefully drill through the plugs. **NOTE: The mixture screw is directly underneath this plug, be ready to pull back on the drill the instant you break through.** Use screw provided to secure and remove this plug. Carefully turn mixture screws clockwise until lightly seated, then back out 2 turns.
